Education

Don Bosco Institute of Technology, University of Mumbai — Mumbai, India
Bachelor of Engineering in Information Technology, CGPA: 9.0/10 | HSC: 90.5% | SSC: 90.2% — *2022 – 2026*

Experience

Software Engineer (SDE Intern, Jan 2026 – Jun 2026) — Jan 2026 – Present
Vector Consulting Group

- Implemented T-SQL supply chain logic for manufacturing and retail clients: recursive BOM explosion, safety stock and buffer sizing, and stockout and buffer-penetration tracking over 30/60/90-day windows
- Migrated client feeds from FTP drops to REST API ingestion and from Excel to streaming CSV, with upsert/delete logic for in-transit and on-hand inventory
- Built Python and SQL schema and duplicate-SKU checks before ERP loads, plus batch SQL for PR/PO quantities
- Developed share-of-business vendor allocation and dynamic vendor norms for purchasing

Software Developer Intern — Feb 2025 – Dec 2025
Advertyzement

- **Alderaan (commerce platform):** Implemented a checkout lock with stock snapshots in Django and PostgreSQL to prevent race conditions on concurrent orders; built transactional checkout with rollback and payment retry
- Built GraphQL mutations for stock, POS and dine-in carts and bulk Excel upload; added Celery jobs that recover stuck orders, invoice PDFs with S3 upload and email, and tests for checkout locks and stock
- **Jedha (AI microservice):** Built a FastAPI health-verdict service using Gemini with API key rotation, model failover and a rule-engine fallback; added JSON schema output, audit logging and an evaluation suite

Research Intern, Machine Learning — Apr 2025 – May 2025
Abhaya Global Information Technology Pvt. Ltd.

- Researched normal vs abnormal ECG beat classification on real hospital data, comparing 1D/2D CNN, LSTM, Random Forest, AdaBoost and XGBoost across preprocessing pipelines
- Best result: Random Forest with SMOTE, 95.3% accuracy and 0.95 F1; findings fed my final-year project

Projects

ECG HeartCare AI | *PyTorch, Django REST, Redis, React, NeuroKit2* — Final-Year Project

- Built an end-to-end ECG platform: 0.5–45 Hz filtering, NeuroKit2 R-peak detection and beat segmentation feeding PyTorch 1D-CNN, ResNet-1D, CNN-BiLSTM and Transformer models for classification and wave boundaries
- Developed a Django REST backend for inference, async training and bulk labeling, with Redis signal ingestion
- Built a React visualizer (Plotly, ECharts) to compare model predictions against clinician labels

TrendSight SaaS | *Django, Pandas, NumPy, PostgreSQL, Stripe, Tailwind CSS* — Team Project

- Built a stock analytics SaaS that pulls Yahoo Finance history and computes RSI, sector relative strength, 10 to 200-day EMAs and volume averages with vectorized Pandas and NumPy, plus sector rotation analysis
- Structured as 6 Django apps with bulk inserts and composite stock-date indexes; integrated Stripe subscriptions (checkout, webhooks, tier limits), a Tailwind UI and GitHub Actions CI over 91 commits and 4 branches

Technical Skills

Languages: Python, SQL, T-SQL, JavaScript, PowerShell
Backend & APIs: Django, Django REST Framework, FastAPI, GraphQL, REST APIs, Celery, Microservices
Databases & Data Engineering: PostgreSQL, SQL Server, SQLite, Redis, ETL, Data Validation
AI & Analytics: PyTorch, scikit-learn, XGBoost, Pandas, NumPy, Machine Learning, Deep Learning
Tools & Platforms: Git, GitHub Actions, CI/CD, Postman, AWS S3, Pub/Sub, Stripe, React

Achievements

- Technical Head, CSI - DBIT Computer Society of India (Jul 2024 – Jul 2025)
- Solved 600+ LeetCode problems (Data Structures and Algorithms)
- Built GitLane, an Android Git client embedding libgit2 via C/JNI, in a hackathon team
